Internal Operations Platform

Phase 1 — MVP

Client: Silver State Waste Solutions

Version: 1.0

Estimated Timeline: 2 Weeks

1. Objective

Build a secure internal operations platform that replaces phone calls, text messages, spreadsheets, and paper notes with one centralized system for dispatchers and drivers.

The platform will allow dispatch to assign jobs, drivers to receive updates in real time, employees to clock in and out, and the company to keep organized records of trucks and dumpsters.

This Phase 1 MVP is intentionally focused on the company's daily operations while providing a strong foundation for future expansion.

2. Success Criteria

At launch the platform should allow the company to:

- Create jobs
- Assign drivers
- Assign trucks
- Assign dumpsters
- Drivers receive updates instantly
- Drivers navigate directly to jobs
- Employees clock in/out

- Upload completion photos
- Track operational location of trucks and dumpsters
- View completed jobs

If these workflows replace the majority of phone calls and paper notes, Phase 1 is considered successful.

3. User Roles

Dispatcher

Responsible for managing daily operations.

Permissions:

- Create jobs
 - Edit jobs
 - Delete jobs
 - Assign drivers
 - Assign trucks
 - Assign dumpsters
 - View employees
 - View assets
 - Update job status
-

Driver

Responsible for completing assigned work.

Permissions:

- View assigned jobs
- Start jobs
- Complete jobs
- Add notes
- Upload photos
- Clock in
- Clock out

Drivers cannot edit other jobs.

4. Core Features

Authentication

Secure login using email/password.

Roles:

- Dispatcher
 - Driver
-

Dispatcher Dashboard

Displays today's operations.

Sections:

Today's Jobs

Shows

- Customer
- Address
- Driver
- Truck
- Dumpster
- Time
- Status

Actions

- Create Job
 - Edit Job
 - Assign Driver
 - Mark Complete
-

Job Details

Each job contains:

Customer Name

Address

Phone Number

Service Type

Dumpster Size

Assigned Driver

Assigned Truck

Assigned Dumpster

Scheduled Date

Notes

Status

Completion Photos

Driver Dashboard

Displays only jobs assigned to that driver.

Each job includes:

Customer

Address

Notes

Status

Button:

Open in Apple Maps

Buttons:

Start Job

Complete Job

Upload Photo

Add Notes

Time Clock

Drivers can

Clock In

Start Break

End Break

Clock Out

Dispatcher can review employee time entries.

Asset Management

Maintain records for trucks and dumpsters.

Truck Record

Truck Number

Assigned Driver

Current Job

Status

Notes

Dumpster Record

Dumpster ID

Size

Current Customer

Current Address

Current Job

Status

AirTag ID (optional)

Notes

Job Photos

Drivers can upload one or more photos before marking a job complete.

Photos become part of the permanent job record.

Real-Time Updates

Changes made by dispatch should appear immediately on the driver's device.

Examples:

New assignment

Changed instructions

Updated status

No page refresh required.

5. Database

Tables

Users

Customers

Jobs

Trucks

Dumpsters

Time Entries

Job Photos

Job Notes

6. Technology Stack

Frontend

- Next.js
- React
- Tailwind CSS

Backend

- Supabase

Authentication

- Supabase Auth

Database

- PostgreSQL

Realtime

- Supabase Realtime

Hosting

- Vercel

Source Control

- GitHub

Development

- Claude Code
-

7. Non-Goals (Phase 1)

The following features are intentionally excluded from this release:

- Billing
- Invoicing
- Payroll
- Customer Portal
- Route Optimization
- Live GPS Tracking
- Fleet Maintenance
- AI Dispatching
- Reporting Dashboard
- Push Notifications

These will be considered future phases.

8. Development Milestones

Days 1–2

- Project setup
 - Database
 - Authentication
 - User roles
-

Days 3–4

- Dispatcher dashboard
 - Job management
 - Customer records
-

Days 5–6

- Driver dashboard
 - Job details
 - Apple Maps integration
-

Day 7

- Time clock
 - Job photos
 - Job notes
-

Day 8

- Truck records
 - Dumpster records
 - Asset management
-

Day 9

- Real-time synchronization
 - QA testing
 - Bug fixes
-

Day 10

- Production deployment
- Team walkthrough
- Launch

9. Future Roadmap

The platform has been designed to support future expansion without rebuilding the foundation.

Potential Phase 2+ features include:

- Live GPS fleet tracking
- Customer portal
- Online scheduling
- Billing & invoicing
- Route optimization
- Fleet maintenance reminders
- Business analytics
- AI-powered dispatch recommendations
- Automated notifications
- Mobile app

Definition of Done

Phase 1 is complete when:

- Dispatch can manage all daily jobs from one dashboard.
- Drivers can complete their work from an iPad or phone.
- Employees can record their work hours.
- Trucks and dumpsters are organized within the system.
- Job updates synchronize in real time.
- The application is deployed securely and ready for daily use.
